

Everything to build anything

Shape your designs with Rexroth aluminum structural framing

Architects and designers are utilizing **Rexroth's aluminum structural framing** as an innovative resource to creatively shape the spaces where we live, work and play.

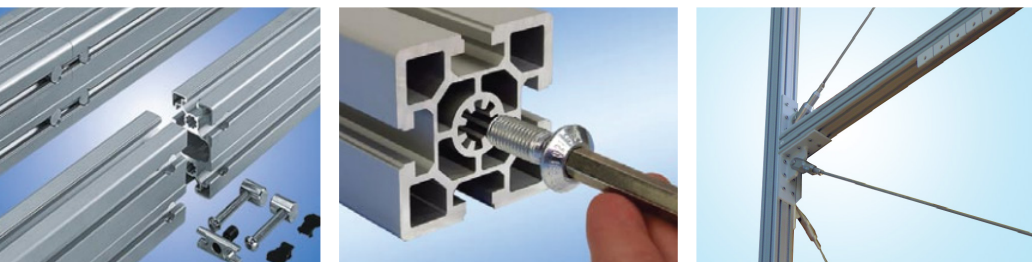

rexroth
A Bosch Company

“Rexroth’s framing enabled us to develop a system of off-site fabricated building based on flexible rules that can achieve multiple outcomes and meet individualized needs.”

James Timberlake

Partner at **KieranTimberlake**, creators of the Cellophane House™ & Loblolly House (above)

STRONG

Lightweight, yet durable and specially engineered to provide high strength-to-weight ratios and superior fit and finish.

MODULAR

The simple T-slot, bolt-together design allows one to preassemble it in one location, break it down, and reassemble it at the final site.

VERSATILE

It can be used from the smallest to largest of projects — picture frames, cabinets and ceiling grids to large museum exhibits and modular houses.

REUSABLE

With a variety of connectors and accessories, the framing can be bolted together rather than welded, nailed or permanently fastened. This provides fast assembly, easy reconfiguration and the ability to reuse materials.

AESTHETIC

The sleek, clean, anodized aluminum elements provide a polished, high-tech look that's both scratch and corrosion resistant.

The only **limit** to what you can **build** is your **imagination**.

ROOM DIVIDERS

WINDOW & DOORWAY FRAMES

CABINETS

Rexroth's aluminum framing simplifies the creation of structures without sacrificing good environmental design or aesthetic appeal. The more you use it, the more ideas will spring forth!

CEILING GRIDS

RAILINGS & WALKWAYS

MODULAR HOMES

STAIRWAYS

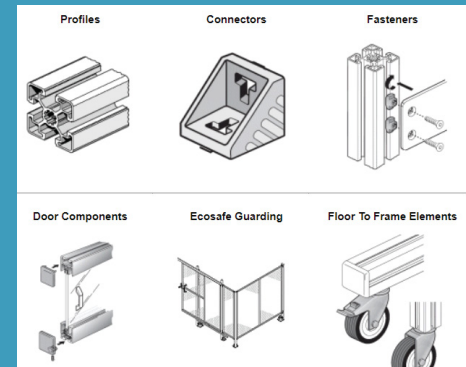

EXHIBITS

TABLES

DESIGN TOOLS

Rexroth offers a full library of CAD files (2D & 3D) and solid model drawings that can be downloaded in almost any format needed. They also provide MTpro as a software to design modules and systems, generate a parts list, and more.

Enjoy easy order fulfillment & support at www.airlinehyd.com

- Fast delivery of the widest range of aluminum structural framing profiles, shapes, sizes, accessories, and connectors
- Online chat support and technical assistance
- Framing profiles in single sticks or bundles, offered in pre-determined lengths or cut to a specified length (by the mm)
- Special mounting & bracketry hardware designs
- Custom profile machining and end finishing (including hole drilling, thread tapping, miter cutting, and milling)
- EcoShape tubular framing
- Kitted materials for quick and easy assembly
- Assistance with (or we can fully supply) design, engineering, fabrication, and installation on certain applications
