

Woehner (Wöhner)

Modular Busbar Systems

Traditional control panel wiring slows builds, wastes space, and complicates future changes.

The Woehner modular busbar system replaces point-to-point wiring with a clean, snap-in power distribution platform that installs faster, improves safety, and increases panel density.

A modular busbar system designed for faster assembly, enhanced safety and scalable configurations for modern industrial applications.

Airline
www.airlinehyd.com

Built for system integrators, OEMs, panel builders, and industrial engineering teams, this solution simplifies construction while supporting easy expansion, maintenance, and long-term reliability - backed by Airline's engineering support and application expertise.

Key Benefits:

- **Faster Installation**

Snap-in components eliminate drilling, excess wiring, and rework.

- **Space Optimization**

Higher panel density in smaller enclosures with improved thermal performance.

- **Improved Safety**

Touch-safe design with verified short-circuit protection safeguards people and equipment.

- **Built for Change**

Easily expand, modify, or maintain panels without redesigning the entire system.

- **Lower Total Cost of Ownership**

Reduce labor, downtime, and lifecycle costs by up to 20–30%.

Ready to modernize your control panels?

Schedule a consultation with Airline to see how Woehner's modular busbar system can work for your next project.
